RECLAIMED & SUSTAINABLE WOOD PRODUCTS

*25 Years & 25 Million Board Feet
of Reclaimed Wood Experience.*

Why Reclaimed

Thanks to a century or more of drying, and the inherent tight grain of old trees, reclaimed timbers offer stability unmatched by fresh sawn or kiln dried varieties, allowing for precise joinery that won't move. Their character is celebrated with hints from the past ranging from bolt holes and ferrous staining to original as-found surfaces and occasional mortise pockets.

Why Builders, Architects, and Timber Framers Choose Us

- **One-stop Resource:** Make one call. If we don't have it in inventory, we do the searching, saving you time and worry.
- **Better Pricing:** High volume purchasing combined with decades of experience.
- **Expand Your Capabilities:** We can S4S and more on both coasts.
- **Chain of Custody Certified:** Ask us for your timbers' history.
- **Choice:** 1.5 MMBF of Reclaimed Wood.
- **Access to Experience & Experts:** Our full-time, dedicated acquisitions team and 50+ employees are at your service.
- **Shipping Peace of Mind:** Our high volume affords us competitive rates. Our experienced team guarantees the perfect load.
- **NY & OR Mills:** With two shops we can handle large & small jobs, shipping anywhere.

Help Us Help You

Help us give you the best quote by providing a few details.
Be sure to let us know which factors are driving the project.

Industrial

Sourced from the factories our country was built on, Industrial Salvaged timbers often have a more uniform patina with band sawn, circle sawn, or planed surfaces along with original bolt holes, nail holes, fastener marks, ferrous staining, checking, occasional knots, and other signs of an industrious life.

Typical Species: Heart Pine, Douglas fir, and less frequently Oak

Other Species: Variety of softwoods including Yellow Pine and Hemlock

Typical Sizes: 6x6, 8x8, 10x10, 9x13, 5x11, 7x13, 7x15, 9x15, 12x15

Agricultural

Antique agricultural timbers are reclaimed from a variety of barns, granaries, storage buildings and other rural structures that have outlived their usefulness. They can be as challenging as they are extraordinary. In addition to their hand-hewn or sawn surfaces, they often include original mortise pockets, tenons, and peg holes, insect marks, checking, and knots.

Typical Species: Mixed Hardwoods

Other Species: Variety of Softwoods

Typical Sizes: 4x6, 6x6, 6x8, 8x8, 9x9, 8x10, 10x10, 11x11

Circle Sawn

Mortise Pockets

Surfaces and More

Precise dimensions with smooth S4S faces, band sawn, or in some cases circular sawn surfaces are available for any of our reclaimed timbers. While surfaces will be cleaner, character including bolt holes, nail holes, bug holes, ferrous staining, checking and other marks will remain visible. Our mills in NY & OR offer custom services such as mitered box beams, jacket boards, and even planing of *your* timbers, reclaimed or fresh.

Custom Dimensions: Timbers we start with need to be, at minimum, 2 inches larger than the sawn dimensions.

What About Oak?

Oak is harder to come by, but if you're interested in Oak, we have a few sources including: Agricultural Reclaimed Hand Hewn or Rough Sawn, Non-FSC Kelo (standing) Oak, and on rare occasion, Industrial Salvaged Oak.
