

Larch—Exterior Siding, Standard

Finish Color: Light Brown

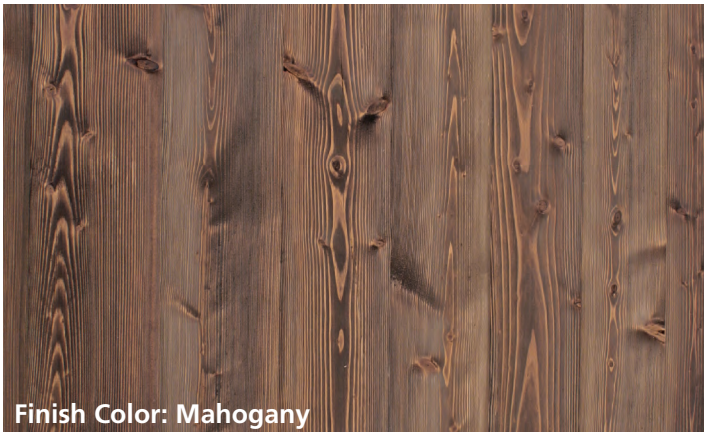

Larch exterior shiplap siding is a great choice for those looking for a durable wood siding option that wears similar to cedar. This species is insect-resistant and moderately rot-resistant. It comes standard with a shiplap profile, and can be run either vertically or horizontally; its long lengths allowing for more coverage in one go. Our Standard Larch is harvested from British Columbia as a bi-product of logging. These commodity timbers are smaller, fast-growing and make for another sustainable option in our palette of exterior sidings.

Order it prefinished with a non-VOC water-based penetrating sealer to save time and money on installation. Our natural finish option will highlight the variations and textures of the Larch, or choose one of our color stain options.

Why Larch?

Larch is an underutilized species with rot resistance greater than Douglas fir, an attractive grain, neutral color, and affordability making it an ideal wood for siding products. By keeping this wood out of pulp mills and fireplaces, you are also doing your part to reduce carbon emissions.

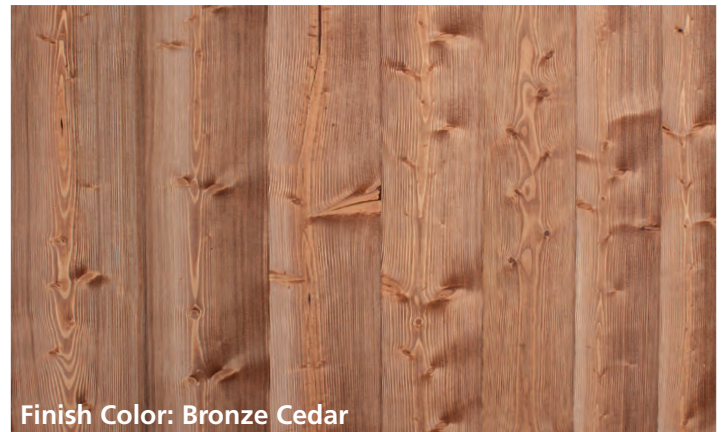

Finish Color: Mahogany

Finish Color: Natural

Finish Color: Battleship Grey

Finish Color: Bronze Cedar

Larch—Exterior Siding, Standard

Dimensions:

- Thickness: 5/8"
- Width: 5" face
- Length: 4-16'

Milling:

- Shiplap

Grades:

- Standard

Surface:

- Wire Brushed

Finish:

- Front Face: 2 coats
- Backside: 1 coat

Features:

- Right-use trees provide neutral colored wood with ethical sourcing
- Larch is naturally rot resistant
- Can be installed with standard fasteners
- No silica dust, less waste, and less landfill costs compared to alternative siding options
